VERTIV™ DEVICE DIRECTOR

Configuration & Maintenance Utility

FEATURES

- Automatic discovery of Vertiv devices on the network*

- Mass configuration of device and network settings

- Mass firmware updates to user-selectable devices

Device Director is a comprehensive, Windows-based utility that is used to install, configure and maintain multiple Vertiv™ devices on the network.

This suite of commissioning and maintenance tools helps users to identify Vertiv rack Power Distribution Units (rPDUs) and environmental monitors on the network and simultaneously configure device settings, network configurations, and update firmware on selected devices. Configuration files may be exported to backup and later restore device settings.
Device Director gives installers a powerful and easy way to mass configure devices while reducing setup and maintenance costs.

Device Director main view

| SYSTEM REQUIREMENTS
